ML202 – FORMATIVE TEST III

Q1. Load `Titanic-Dataset.csv` into a DataFrame called `df1`, then display the first 5 rows.

Q2. Write code to group the dataframe by the '`Survived`' column and find the mean.

Q3. Write code to create a function that takes an argument and converts it into uppercase letters.

Q4. Write code to apply the function created in the previous question and apply it to the '`Name`' column.

Q5. Write code to create a dataframe, '`df2`'. This dataframe should contain three columns, '`id`', '`first_name`', '`last_name`'. Add three rows of data to the dataframe.

Q6. Write code to create a second dataframe, '`df3`'. This dataframe should also contain three columns, '`id`', '`first_name`', '`last_name`'. Add one row of data to the dataframe. Concatenate `df3` with `df1`.
