ML202 – FORMATIVE TEST I

Q1. Load `Titanic-Dataset.csv` into a DataFrame called `dataframe`, then display the first 10 rows.

Q2. Write code to calculate the mean of all numeric columns grouped by `Age`.

Q3. Write code to calculate the mean of all numeric columns grouped by `Survived`.

Q4. Write code to rename the `Sex` column to '`Gender`'.

Q5. In the Gender column, replace '`female`' with '`woman`'.

Q6. Write code to calculate the maximum age in the `Age` column.

Q7. Write code to show all the unique values in the `Gender` column.

Q8. Write code to show the value counts of the `Gender` column.

Q9. Write code to drop the `SibSp`, `Parch` columns from the dataset.

Q10. Write code to drop all duplicates from the dataframe.
